

## **Nuclear Medicine**

### **111Indium labelled Octreotide Scan**

#### **Patient Information**

This leaflet will provide you with the necessary information about your 111Indium labelled Octreotide scan.

#### **What is an 111Indium labelled Octreotide scan?**

A 111 Indium labelled Octreotide scan is a diagnostic procedure to locate suspected primary neuroendocrine tumours or for follow-up or staging after treatment.

#### **Preparation for the 111Indium labelled Octreotide scan**

Please inform us before you attend:

- If you are or think you may be pregnant
- If you are breastfeeding
- If you have problems weight bearing and need a hoist to be transferred
- If you are unable to lie still and flat on your back for 45 minutes

#### **Pregnancy and breastfeeding**

If you think that you are pregnant or think you may possibly be pregnant you must inform the department. This is because the foetus may receive some of the radioactivity.

If you are breastfeeding, your doctor may delay the use of the scan, or ask you to stop breastfeeding.

#### **The 111Indium labelled Octreotide scan**

The test involves having a small injection of radioactive tracer into a vein in your hand or arm. You will then be asked to return to the department, approximately 4 hours after the injection, for the scan. During this interval you can leave the department and eat and drink normally. On your return please allow 60 to 90 minutes in the department.

You will not be asked to get changed into a hospital gown and to remove any jewellery prior to the scan. The scans are taken with the gamma cameras very close to you but you will not be enclosed in a tunnel or be left alone at any time.

We will make every effort to make you comfortable as the scan time can be between 60-90 minutes.

You will be asked to return 24 hours and possibly 48 hours after the injection for further scans. These scans may also take 60 to 90 minutes.

Due to the nature of the test it is advisable not to bring children to the department, unless they are the patient.

#### **After effects of an 111Indium labelled Octreotide scan**

There are no known after effects from the 111Indium labelled Octreotide scan. You will be able to drive, travel by public transport and return to work if necessary. You will be advised to drink plenty of fluids and empty your bladder often. This assists the tracer to discard from your body quickly.

## What are the risks of an In111 Indium labelled Octreotide scan?

The amount of radiation that you will receive from this investigation is very low and similar to the natural background radiation we all receive from the environment over a period of 27 months.

## Where is an 111Indium labelled Octreotide scan performed?

The 111 Indium labelled Octreotide scan is only performed in the Nuclear Medicine SPECT CT Department which is situated in the X-Ray Department. On arrival, please book in at **X-Ray Reception** on the **Ground Floor**, close to the **Outpatient Entrance**.

As there is limited parking at the hospital, please allow extra time when planning your journey. If possible, please use public transport.

## Who can accompany me for the scan?

We would prefer that you do not bring more than one person with you.

Please note there are no childcare facilities available and children regrettably are not permitted to enter the examination rooms, unless they are having a scan.

## Results of the 111Indium labelled Octreotide scan

The 111 Indium labelled Octreotide scan images will be reported by a Nuclear Medicine Radiologist and the report will be forwarded to the doctor who requested the scan.

## Travel Abroad

If you intend to travel abroad within 5 days of your scan please keep your appointment letter to take with you when you travel.

## Diabetic patients

Please phone 01895 279368 for further instructions.

## Diagnostic Imaging Dataset (DID)

Information from your diagnostic test will contribute to the Diagnostic Imaging Dataset (DID). This is a secure database that holds information on the imaging tests and scans carried out on NHS patients. This will allow the Health and Social Care Information Centre to see how different tests are used across the country.

Anonymised images may also be used for educational and academic purposes, both nationally and internationally. Nothing will be reported that identifies you. It is only made available to appropriate staff and is kept strictly confidential. However, if you do not want your information to be stored in the DID, please let us know on the day of your scan and we will make sure your information is not copied into the DID.

## Who should I contact if I have a problem or question?

Monday to Friday, 8am to 4.30pm – please contact Nuclear Medicine SPECT CT Department on 01895 279368. Out of hours you should contact your GP.
