After removing the last BD Vacutainer® Tube or BD Bactec™ Blood Culture Bottle, dispose of the entire assembly (Blood Transfer Device and syringe) as one unit in an approved sharps container. Do not unthread the syringe from the Blood Transfer Device prior to disposal.

DO NOT REUSE.
CAUTION: Handle all biologic samples and blood collection “sharps” (lancets, needles, luer adapters and blood collection sets) according to the policies and procedures of your organisation. Obtain appropriate medical attention in the event of any exposure to biologic samples (for example, through a puncture injury), since samples may transmit viral hepatitis, HIV (AIDS) or other infectious diseases. Utilise any safety-engineered feature if the blood collection device provides one. Discard all blood collection “sharps” in biohazard containers approved for their disposal.
